

Customer Journey Map

Date	29 June 2026
Team ID	
Project Name	Rising Waters: Smart AI Flood Prediction System
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	•Collect rainfall and weather data. •Open the Flood Prediction application •Enter meteorological values.	•Submit the data. •View flood prediction •Analyze flood risk level.	•Issue flood alerts if risk is high.. • Plan evacuation and rescue operations. • Monitor affected regions continuously
Touchpoint <i>What part of the service do they interact with?</i>	• Home Page • Prediction Input Form • Weather Data Entry	• Machine Learning Prediction Engine • Flask Web Application • Prediction Result Page	• Flood Alert Dashboard • Disaster Management Team • Emergency Response System
Customer Thought <i>What is the customer thinking?</i>	• "Is my weather data accurate?" • "Will the system predict correctly?" • "I hope this helps prevent disasters."	• • "How accurate is the prediction?" • "Should I issue an alert now?" • "Can I trust the AI model?"	• • "People must be warned immediately." • "Resources should reach high-risk areas first." • "Continuous monitoring is important."

Customer Feeling <i>What is the customer feeling?</i>	• Curious • Hopeful • Responsible	• Focused • Confident • Alert	• Relieved if flood risk is low • Urgent during high-risk situations • Satisfied when lives are protected
Process Ownership <i>Who is in the lead on this?</i>	• Meteorologist / Data Analyst	• AI Flood Prediction System	• Disaster Management Authority / Emergency Response Team
Opportunities <i>How can we improve this stage?</i>	• Integrate live weather APIs. • Automatically fetch rainfall data. • Improve data quality checks.	• Increase prediction accuracy. • Display probability scores and maps. • Reduce prediction time.	• Send SMS/Email alerts automatically. • Integrate GIS maps and mobile notifications. • Deploy on IBM Cloud for real-time accessibility.
