

Demonstration of Proposed Features

Date	21 June 2026
Team ID	
Project Name	Rising Waters: Smart AI Flood Prediction System
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Scenario 1: Early Warning Advisory	Meteorologist inputs live district parameters (rainfall/visibility) to trigger early evacuation alerts.	Implemented	Yes	Successfully verified using extreme precipitation simulation profiles.
2	Scenario 2: Resource Deployment	Disaster coordinators cross-examine multiple risk zones to map priority logistics distribution targets.	Implemented	Yes	Active real-time routing logic handles concurrent regional evaluations.
3	Scenario 3: Model Validation Platform	Government analyst benchmarks predictive accuracy thresholds against historic dataset logs.	Implemented	Yes	Formally validated; XGBoost architecture achieves an accuracy score of 96.55%.
4	Flask Web Portal Dashboard	Intuitive graphical interface allowing local users to interactively call inference requests.	Implemented	Yes	Local responsive rendering matches layout designs seamlessly.
5	Live Telemetry Webhooks API	Automated data engine querying background regional climate fields continuously.	Partial	No	Pipeline functions correctly but requires manual trigger tokens for now.
6	Spatial Geolocation Map Layer	Mapping engine plotting localized hazard coordinates directly onto dashboard tracking windows.	Pending	No	Postponed to subsequent optimization sprint cycles.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	5
Total Features Demonstrated	4
Overall Implementation Rate (%)	83.33%
