

Team Involvement in Demonstration

Date	29 June 2026
Team ID	
Project Name	Rising Waters: Smart AI Flood Prediction System
Maximum Marks	1 Mark

Team Involvement in Demonstration:

This document records the active participation and roles of each team member during the project demonstration. It ensures that every member contributes meaningfully to the presentation and that responsibilities are distributed fairly and clearly.

S.No	Team Member Name	Role in Demo	Section Presented	Contribution Summary	Participation (Active / Passive)
1	G. Jaya Prakash Reddy	Team Lead & Host	Project Introduction, Problem Scope & Cloud Infrastructure	Coordinated overall project development; managed deployment of the Flask application stack onto the IBM Cloud platform runtime environments.	Active
2	P. Usharani	Data Engineer	Preprocessing Pipeline & Dataset Profiling	Structured data engineering cycles, treated feature imbalances, and validated scaling states against standard meteorological ranges.	Active
3	Y. R. Kiran Kumar	Testing Specialist	Concurrent Stress & Performance Testing	Designed load test scenarios via automated collection runners to evaluate average response speeds under high concurrent user volumes.	Active
4	V. Yuva Kishore	UI / Frontend Developer	Flask Interface Navigation & Use Case Validation	Designed the interactive dashboard panels and mapped user input telemetry triggers to handle predictive outcome results dynamically.	Active
5	Y. Madhu	Machine Learning Architect	Multi-Model Algorithms & Performance Tuning	Handled exploratory data analysis, comparative pipeline evaluation configurations, and finalized the optimized XGBoost architecture (floods.save).	Active

Team Coordination Notes:

Aspect	Details
Team Leader / Coordinator	G. Jaya Prakash Reddy
Overall Team Coordination Rating (1-5)	5 / 5
Any issues during demo	Minor initial initialization delays during the live web demo due to server container cold-start times on the free-tier runtime.
How issues were resolved	Evaluated locally using the persistent Python fallback server command script directly out of Anaconda Prompt to show seamless real-time responses without internet-dependent lag
